Robotico

LINE FEEDER

Precision cutting and placement of tube dividers

The Problem

Humidity causes repelling defects in stored metal tubes, even with air drying during production.

Workers manually cut and insert ropes as dividers, slowing production and increasing labor costs.

Our Solution

Patent-pending LINE FEEDER cuts & places nylon dividers, seamlessly integrating into existing stackers

- **LINE FEEDER precisely feeds, cuts, and places nylon lines on each row of tubes.**
- **LINE FEEDER adjusts line dividers to match various tube stack configurations.**

Benefits

Enhances Operational Efficiency

Automated divider cutting and placement eliminates manual labour.

Eliminates Human Intervention

Automated divider cutting and placement improves workplace safety.
